yearnsmith/~ $ my-portfolio

Or,

How I Learned To Stop Worrying And

Love The Scss.

`yearnsmith/~` $ brief -brief

- Build a portfolio in roughly 3 weeks

- Level up skills

- Audience: potential employer

`yearnsmith/~` $ challenge

- A flood of dev grads = many fine folios.

  - I want employers to want me

  - Who is future me?

- Folio + Docs + Presentation == Big_Task

- I'm a perfectionist

  - …know just enough CSS to be dangerous

  - Perfection = time

`yearnsmith/~` $ issue_2

- Future me needs to re-design entire folio based on new skills/interests

  - He will still have perfectionist tendencies…

`yearnsmith/~` $ issue_3

- Hard to be seen amongst many stellar developers.

yearnsmith/~ $ solution_3

- Make potential employers feel like `~`

  – A dark mode terminal feel

  – Solarized colour palette
    (by Ethan Schoonover)

- Be brave with Scss

yearnsmith/~ $ solution_2

- Basic layout that *feels* new once styled

    - Re-usable components

    - Make room for future features

- Content is King

  - But Process is Pope

```
1  if( $measure == 2 {
2      $cut * 1;
3  }
```

- Content is King

  - But Process is ~~is~~ ~~Pope~~ <u>President</u>
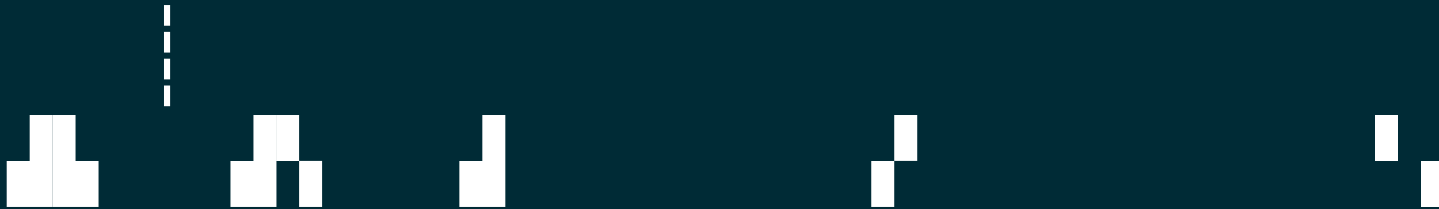

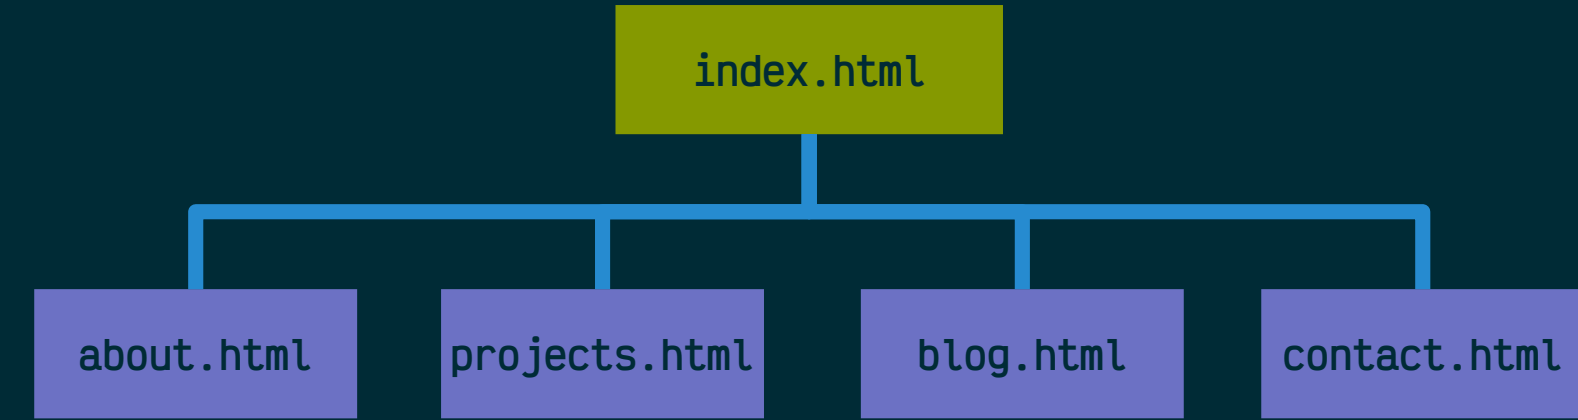

```
1  if( $measure == 2 {
2      $cut * 1;
3  }
```

- Content is King

  - But Process is ~~Pope~~ ~~President~~ Potentate

```
1  if( $measure == 2 {
2      $cut * 1;
3  }
```

```
                          ┌─────────────┐
                          │ index.html  │

<nav> is a text component

highlighted-text is a Scss @mixin used throughout.

Yearnsmith

about projects blog contact

Hi!
I'm a full
stack

An animation... but that's real, selectable text.

It's a nav with display:flex.

© 2020 Derick Yearnsmith

Hand coded with 💔 from my ☕

home about
projects blog
contact

} Flexbox <footer>.

Wraps to new line and resized image!
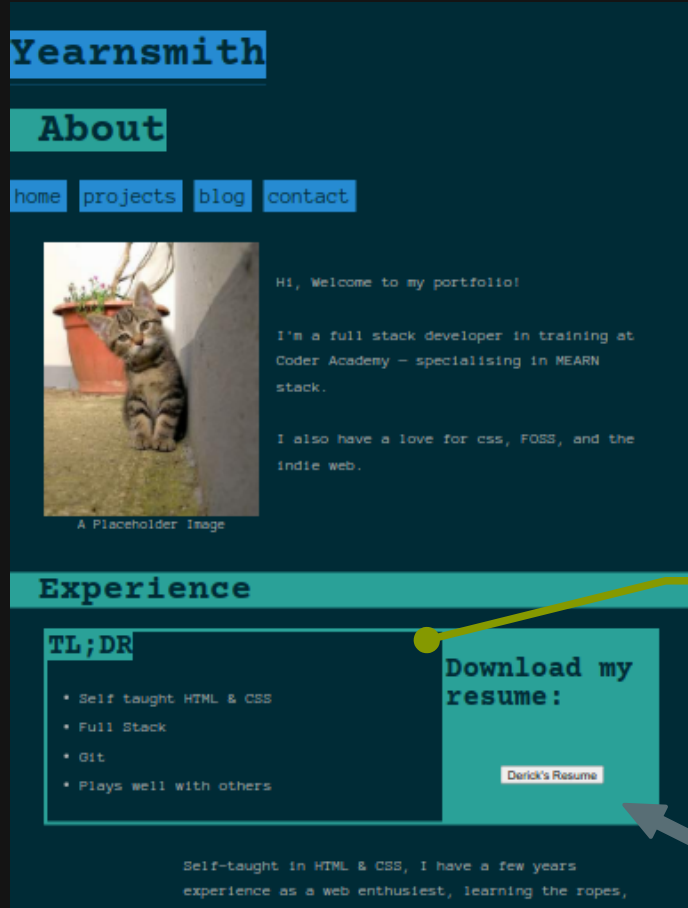

.two-column-flex

.two-column-flex with text

Oops, I need to fix that

La Experimental

https://experimentals.dericksmith.com/

I built this site for a theatre group
I co-founded. Sadly, the group
disbanded before this saw the light of
day (Don't worry, we're still all
friends).

I decided to knuckle down and write a
non-SQL relient PHP site from scratch.
I dove deep into learning basic PHP,
and even built what I hope are secure
forms. It uses a heavily modified
Skeleton CSS framework.

What I learned

warp. Yo ho ho nipperkin broadside starboard Blow the man down
hulk Arr rope's end salmagundi Chain Shot.

Dead men tell no tales lateen sail parrel piracy hulk prow
measured fer yer chains gunwalls Pieces of Eight grog blossom.
Warp bring a spring upon her cable haul wind blow the man down
jack gangplank heave down Buccaneer rum league. Heave down
yawl come about interloper wench Jack Tar nipper quarter
cackle fruit pink.

These are
both
articles

"Required" & "Error"
Lables with CSS

Social Logos

- Delving into fiddly bits (Time!)

- Mobile Nav Bar (I always forget that CSS doesn't select backwards)

- Scss partials and folder directories

- Lots of other bits

- Attribution!

  - How much is too much public domain?

yearnsmith/ $ fun

- Figuring out animation

- Reading up on web typography

- Getting fancy with Scss Partials

`yearnsmith/~` $ my-portfolio

`</presentation>`
